SAUMYA

Software Engineer | Real-Time Systems | MERN Stack | Python/ML
Noida, India | Open to Relocation | msaumya.softwares@outlook.com | +91-9517222274
www.linkedin.com/in/msaumya27 | github.com/s-vashistha | s-vashistha.github.io/PORTFOLIO

PROFESSIONAL SUMMARY

Software Engineer with 2 years full-time production experience in real-time systems, REST APIs, and full-stack applications. Specialized in WebSockets/multi-tenant SaaS architecture, Python/ML integration, and geospatial databases. Delivered enterprise systems handling 20+ concurrent users with 99% uptime.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, C++

Frontend: React.js, Next.js, Three.js, Tailwind CSS, Leaflet.js, Recharts, Vite

Backend: Node.js, Express.js, Socket.io, REST API Development, API Architecture, Microservices

Databases: PostgreSQL, MongoDB, MySQL

AI/ML & Data Science: Scikit-learn, Pandas, NumPy, ARIMA, Prophet, Time Series Analysis, Feature Engineering

Data & Automation: Selenium, BeautifulSoup, Web Scraping, Data Pipeline Development

DevOps & Cloud: Git, GitHub Actions, CI/CD Pipelines, Docker, AWS (EC2, RDS, S3, CloudFront, Lambda), Render, Vercel

Core Concepts: JWT Authentication, RBAC, WebSockets, Real-time Systems, Scalable Architecture, Machine Learning, Data Pipelines

WORK EXPERIENCE

Software Engineer (Intern → Full-Time) Sept 2024 – Present

Genicminds Tech Pvt. Ltd. · Noida, India

- Architected and deployed gengindia.com and kbmc.gov.in — fully dynamic production web applications with a custom RBAC admin dashboard, serving enterprise and public-sector users with 99% uptime.
- Built and secured 25+ REST APIs using Node.js and Express.js, reducing average response time by ~30% and improving API reliability across production systems.
- Engineered a production-grade HRMS platform with RBAC and JWT authentication, supporting 30+ active users and reducing manual administrative effort by ~40%.
- Integrated real-time data systems using WebSockets (Socket.io), reducing data latency from seconds to sub-second updates (~80% faster).
- Developed Python data extraction pipelines using Selenium and BeautifulSoup for automated web scraping, processing 1000+ records daily. Integrated cleaned data into PostgreSQL database using Pandas for analytics, reducing manual data entry effort by ~60%.
- Implemented CI/CD pipelines using GitHub Actions, reducing deployment time by ~50% and enabling faster release cycles.

PROJECTS

Real-Time Disaster Response Platform s-vashistha.github.io/disaster-response-platform 2026

Node.js · React.js · WebSockets · Socket.io · JWT · RBAC · PostgreSQL · REST APIs · Leaflet.js

- Designed a full stack real-time incident tracking system supporting 20+ concurrent users with WebSocket updates and event-driven alerts.
- Implemented secure REST API architecture with JWT authentication and RBAC across multiple user types.
- Integrated geospatial data visualisation using Leaflet.js for location-based monitoring, improving response planning efficiency by ~25%.

Multi-Tenant SaaS Platform multi-tenant-saa-s-platform-seven.vercel.app | github.com/s-vashistha/MultiTenant-SaaS-Platform 2026

Node.js · Express.js · React.js · PostgreSQL · RBAC · JWT · Multi-tenancy · Render

- Architected a multi-tenant SaaS platform supporting 3+ organisations with schema-level PostgreSQL isolation and RBAC.
- Built tenant-aware REST API routing with Node.js and Express.js on Render, improving API request handling efficiency by ~30%.
- Designed role-driven React.js dashboards improving workflow efficiency and user management for 30+ active users.

Sales Forecasting & Inventory Optimization sales-forecasting-seven.vercel.app | github.com/s-vashistha/sales-forecasting 2026

Python, Pandas, Scikit-learn, Time Series, Flask, React.js

- Developed machine learning time-series forecasting model using ARIMA and Prophet to predict product sales with 82% accuracy. Implemented feature engineering pipeline (moving averages, lag features, seasonal decomposition) improving model performance by 15%.
- Built Flask REST API exposing ML model predictions for real-time inventory recommendations, integrated with React.js dashboard visualizing forecasts vs actual sales with confidence intervals.
- Model predictions reduced excess inventory by ~25% and stockout incidents by ~40%, demonstrating ML application to business optimization.

EDUCATION

B.Tech — Computer Science and Engineering, *Dr. A.P.J. Abdul Kalam Technical University* · CGPA: 7.52 2020 – 2024

ACHIEVEMENTS

- Solved 250+ DSA problems on LeetCode and CodeChef, demonstrating strong command of data structures and algorithms.
- Gold Medallist — Young Scientist Innovation Competition.
